

ROADS ASSET MANAGEMENT PLAN 2015

ASSET MANAGEMENT PLAN (AMP)

The AMP shows how we are planning for future management of assets and identifies ways to fund the repair & maintenance of current assets. **SEE ALSO CSP 2013 & 2104.**

The main change to the **AMP is for Roads** where Council has now decided to include funds each year for sealing of around 1km to 2km of the Unsealed Rural Road Network.

A change has also been made to reflect the IPART approval for a Special Rate Variation to the General Rates which is to be used mainly for improving the more heavily utilised rural freight transport routes – see list of roads below:

In March 2015 following community consultations it was decided to submit an application for a Special Rate Variation (SRV) for the Ordinary (General) Rates only for a 5 year period commencing 1 July 2015.

This SRV, which includes the Rate Pegging Limit for each year (assumed to be 2.4% for 2015/16 and then 3% each year from 2016/17 to 2019/20), was approved by IPART as follows:

2015/16	2016/17	2017/18	2018/19	2019/20
6.50%	6.90%	6.95%	7.00%	7.00%

The SRV will be used to enhance financial sustainability and reduce infrastructure backlog.

In 2015/16 we anticipate generating an additional \$136,174 in income which will be used to:

<i>Provide additional funds to supplement grading on all rural unsealed roads</i>	\$20,426 (15%)
<i>Upgrade and improve heavily utilised rural freight transport routes as identified during the Special Rate Variation application.</i>	\$108,939 (80%)
<i>Develop asset based data sets</i>	\$1,362 (1%)
<i>Repayment of Local Infrastructure Renewal Scheme</i>	\$5,447 (4%)

The transport routes identified are:

Dog Rocks Road
 Lowes Mount Road
 Hazelgrove Road
 Beaconsfield Road
 Sewells Creek Road
 Campbells River Road
 Burruga Road
 Abercrombie Road

Following is an extract from the Roads Asset Management Plan adopted in June 2014, which will be amended prior to finalising in June 2015.

1. EXECUTIVE SUMMARY

Context

The Oberon Local Government Area (LGA) is located adjacent to the Blue Mountains of New South Wales on the Great Dividing Range, 196 km west (two-hour drive) of Sydney. Much of the area is considered to be sub-alpine with the Oberon township 1,113 metres above sea level.

The sub-alpine climate creates challenges for Oberon Council in effectively managing the road network. Minimal road work can be undertaken in the winter and sub-surface water erupts from the ground in spring, resulting in localised pavement deterioration.

Oberon Council is committed to maintaining a quality road network for the community and industry. Oberon has a thriving forestry industry, which requires reliable sealed road access.

The major issue facing Oberon Council in maintaining the road network is the aging of the sealed road network. Oberon Council must act promptly to reseal and renew sealed roads across the Shire before they reach the end of their useful life.

The Road Service

The Road network comprises:

- Bridges
- Sealed roads pavement
- Sealed roads surface
- Kerb and gutter
- Footpaths
- Unsealed roads pavement

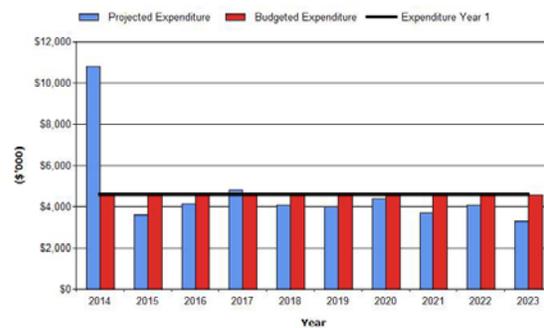

These infrastructure assets have a replacement value of \$178,411,418.

What does it Cost?

The projected outlays necessary to provide the services covered by this Asset Management Plan (AM Plan) includes operations, maintenance, renewal and upgrade of existing assets over the 10 year planning period is \$46,900,000 or \$4,690,000 on average per year.

Estimated available funding for this period is \$45,620,000 or \$4,562,000 on average per year which is 97% of the cost to provide the service. This is a funding shortfall of \$128,000 on average per year. Projected expenditure required to provide services in the AM Plan compared with planned expenditure currently included in the Long Term Financial Plan are shown in the graph below.

Oberon - Projected and Budget Expenditure for (Roads_S1_V2)

What we will do

We plan to provide road services for the following:

- Operation, maintenance, renewal and upgrade of bridges, roads and footpaths to meet service levels set in annual budgets.
- Plan to reconstruct urban roads before the pavement and seal reach end of life within the 10 year planning period.

What we cannot do

We do **not** have enough funding to provide all services at the desired service levels or provide new services. Works and services that cannot be provided under present funding levels are:

- Seal all of the unsealed roads across the Shire which the community would like to see sealed.
- Repair all of the road defects across the road network.

Managing the Risks

There are risks associated with providing the service and not being able to complete all identified activities and projects. We have identified major risks as:

- Again infrastructure requiring renewal or replacement
- Rising costs of managing infrastructure
- Managing the community expectations for levels of service
- Impact of climate change on road assets

We will endeavour to manage these risks within available funding by:

- Assessing the condition of road assets and renewing/ replacing as funding becomes available.
- Move towards planned and proactive asset management, which is more cost-effective than reactive management

- Work with the community to determine achievable performance targets for levels of service.

Confidence Levels

This AM Plan is based on medium level of confidence information.

The Next Steps

The actions resulting from this asset management plan are:

- Maintain road assets in a safe condition within available funding
- Continue to assess and rate the condition of assets to better inform future versions of this AM Plan
- Define the maintenance standards and levels of service which can be delivered to the community at various funding levels
- Improve the analysis of options so that an informed discussion can be had with the community about priorities and future levels of service and funding,
- Prioritise renewal and upgrade works based on risk,
- Continue to improve asset information and knowledge,
- Monitor the provision of road infrastructure in line with community expectations as expressed in the Oberon Community Strategic Plan.
- Increase knowledge of asset management within the community and elected Council with respect to road maintenance, renewal, replacement and upgrades.

Questions you may have

What is this plan about?

This asset management plan covers the infrastructure assets that serve the Oberon community's road needs. These assets include bridges, roads and footpaths throughout the community area that enable people to get to where they would like to go.

What is an Asset Management Plan?

Asset management planning is a comprehensive process to ensure delivery of services from infrastructure is provided in a financially sustainable manner.

An asset management plan details information about infrastructure assets including actions required to provide an agreed level of service in the most cost effective manner. The plan defines the services to be provided, how the services are provided and what funds are required to provide the services.

Why is there a funding shortfall?

Most of the organisation's road network was constructed by developers and from government grants, often provided and accepted without consideration of ongoing operations, maintenance and replacement needs.

Many of these assets are approaching the later years of their life and require replacement, services from the assets are decreasing and maintenance costs are increasing.

Our present funding levels are insufficient to continue to provide existing services at current levels in the medium term.

What options do we have?

Resolving the funding shortfall involves several steps:

1. Improving asset knowledge so that data accurately records the asset inventory, how assets are performing and when assets are not able to provide the required service levels,
2. Improving our efficiency in operating, maintaining, renewing and replacing existing assets to optimise life cycle costs,
3. Identifying and managing risks associated with providing services from infrastructure,

4. Making trade-offs between service levels and costs to ensure that the community receives the best return from infrastructure,
5. Identifying assets surplus to needs for disposal to make saving in future operations and maintenance costs,
6. Consulting with the community to ensure that road services and costs meet community needs and are affordable,
7. Developing partnership with other bodies, where available to provide services,
8. Seeking additional funding from governments and other bodies to better reflect a 'whole of government' funding approach to infrastructure services.

What happens if we don't manage the shortfall?

It is likely that we will have to reduce service levels in some areas, unless new sources of revenue are found. For roads, the service level reduction may include allowing the condition of some roads to deteriorate to failure.

Horace Street, Oberon

What can we do?

We can develop options, costs and priorities for future roads services, consult with the community to plan future services to match the community service needs with ability to pay for services and maximise community benefits against costs.

What can you do?

We will be pleased to consider your thoughts on the issues raised in this asset management plan and suggestions on how we may change or reduce the mix of services to ensure that the appropriate level of service can be provided to the community within available funding.

2. INTRODUCTION

2.1 Background

This asset management plan is to demonstrate responsive management of assets (and services provided from assets), compliance with regulatory requirements, and to communicate funding needed to provide the required levels of service over a 20 year planning period.

The asset management plan follows the format for AM Plans recommended in Section 4.2.6 of the International Infrastructure Management Manual¹. The asset management plan is to be read with the organisation's Asset Management Policy, Asset Management Strategy and the following associated planning documents:

- Oberon Community Strategic Plan 2013
- Oberon Community Engagement Strategy May 2013

The infrastructure assets covered by this asset management plan are shown in Table 2.1. These assets are used to provide road services to its community.

Table 2.1: Assets covered by this Plan

Asset category	Dimension	Replacement Value
Bridges	29	\$7,363,626
Footpaths	21.4km	\$2,860,239
Kerb and gutter	33.8km	\$3,289,569
Road formation	966m	\$18,398,793
Road pavement	966km	\$129,848,003
Sealed road surface	437km	\$16,650,688
TOTAL		\$178,411,418

Key stakeholders in the preparation and implementation of this asset management plan are: Shown in Table 2.1.1.

Table 2.1.1: Key Stakeholders in the AM Plan

Key Stakeholder	Role in Asset Management Plan
Councillors/Board Members	<ul style="list-style-type: none"> • Represent needs of community/shareholders, • Allocate resources to meet the organisation's objectives in providing services while managing risks, • Ensure organisation is financial sustainable.
CEO/General Manager	<ul style="list-style-type: none"> • Supporting implementation of best practice asset management at Oberon, • Ensuring that staff are provided with appropriate systems, training and resources because it is difficult to develop a long term vision when crisis management and short term asset development are stretching resources.
Rate payers and residents	Consumer of the services provided by road assets
Business and industry	Consumer (and funder in some circumstances i.e. timber industry funds some roads)
NSW Roads and Maritime Services	<p>Funder</p> <ul style="list-style-type: none"> • Confident that their investment is secure and economic returns are being maximised • Operational capability of roads is being maintained <p>Regulator -Ensuring that Council complies with service performance, risk management and network access requirements.</p>

¹ IPWEA, 2011, Sec 4.2.6, Example of an Asset Management Plan Structure, pp 4|24 – 27.

2.2 Goals and Objectives of Asset Management

The organisation exists to provide services to its community. Some of these services are provided by infrastructure assets. We have acquired infrastructure assets by 'purchase', by contract, construction by our staff and by donation of assets constructed by developers and others to meet increased levels of service.

Our goal in managing infrastructure assets is to meet the defined level of service (as amended from time to time) in the most cost effective manner for present and future consumers. The key elements of infrastructure asset management are:

- Providing a defined level of service and monitoring performance,
- Managing the impact of growth through demand management and infrastructure investment,
- Taking a lifecycle approach to developing cost-effective management strategies for the long-term that meet the defined level of service,
- Identifying, assessing and appropriately controlling risks, and
- Having a long-term financial plan which identifies required, affordable expenditure and how it will be financed.²

2.3 Plan Framework

Key elements of the plan are

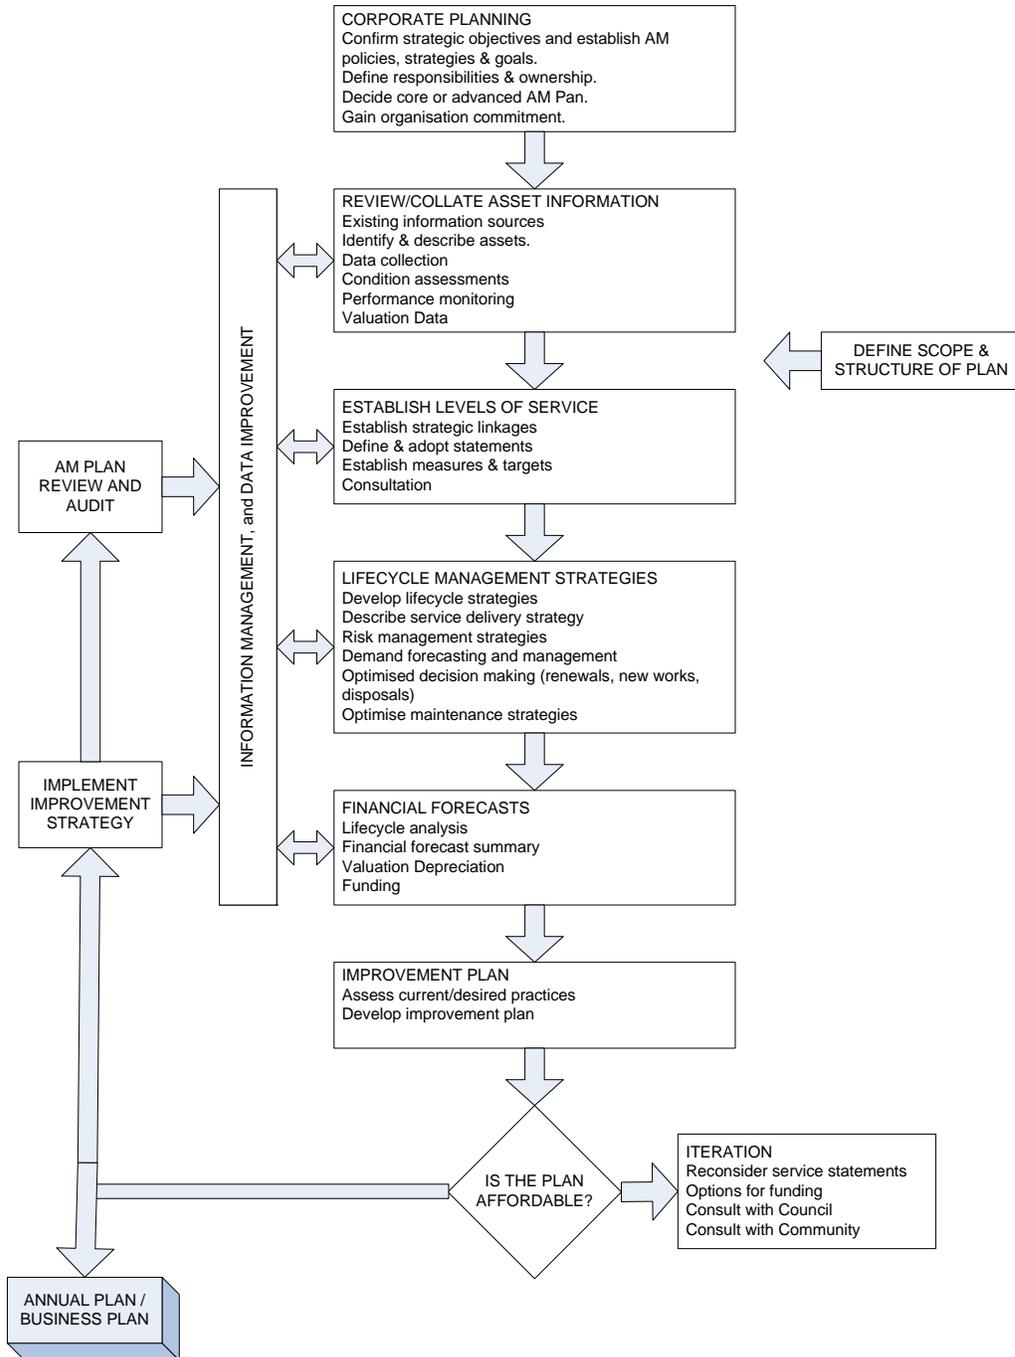

- Levels of service – specifies the services and levels of service to be provided by the organisation,
- Future demand – how this will impact on future service delivery and how this is to be met,
- Life cycle management – how we will manage our existing and future assets to provide defined levels of service,
- Financial summary – what funds are required to provide the defined services,
- Asset management practices,
- Monitoring – how the plan will be monitored to ensure it is meeting the organisation's objectives,
- Asset management improvement plan.

A road map for preparing an asset management plan is shown on the following page.

² Based on IPWEA, 2011, IIMM, Sec 1.2 p 1|7.

Road Map for preparing an Asset Management Plan

Source: IPWEA, 2006, IIMM, Fig 1.5.1, p 1.11.

2.4 Core and Advanced Asset Management

This asset management plan is prepared as a 'core' asset management plan over a 20 year planning period in accordance with the International Infrastructure Management Manual³. It is prepared to meet minimum legislative and organisational requirements for sustainable service delivery and long term financial planning and reporting. Core asset management is a 'top down' approach where analysis is applied at the 'system' or 'network' level.

Future revisions of this asset management plan will move towards 'advanced' asset management using a 'bottom up' approach for gathering asset information for individual assets to support the optimisation of activities and programs to meet agreed service levels.

2.5 Community Consultation

This 'core' asset management plan is prepared to facilitate community consultation initially through feedback on public display of draft asset management plans prior to adoption by the Council. Future revisions of the asset management plan will incorporate community consultation on service levels and costs of providing the service. This will assist the Council and the community in matching the level of service needed by the community, service risks and consequences with the community's ability and willingness to pay for the service.

³ IPWEA, 2011, IIMM.

3. LEVELS OF SERVICE

3.1 Customer Research and Expectations

The organisation has not carried out any research on customer expectations. This will be investigated for future updates of the asset management plan.

3.2 Strategic and Corporate Goals

This asset management plan is prepared under the direction of the organisation’s vision, mission, goals and objectives.

Our vision is:

A prosperous town, villages and rural communities set amongst the rolling hills, rivers, forests, mountains and caves of the Great Divide. A breath of fresh air in a landscape of light, colour and seasonal beauty. Life as it should be!

FUTURE DIRECTIONS

There are six FUTURE DIRECTIONS Council will follow to achieve our preferred future

OUR COMMUNITY
BASIC SERVICES
ECONOMIC PROSPERITY
RESPONSIVE and CARING
OPEN COMMUNICATION
NATURAL ENVIRONMENT

Relevant organisation goals and objectives and how these are addressed in this asset management plan are:

Table 3.2: Organisation Goals and how these are addressed in this Plan

Goal	Objective	How Goal and Objectives are addressed in AM Plan
Basic Services	A useful and safe local, regional and state road network that connects communities	This AM will enable Oberon Council to plan more effectively the sustainable management of road assets and allocate funding to road works in a manner that achieves the most value for the community.
Open communication	Well-informed communities whose views are heard	This AM plan sets out transparently how Oberon Council will manage road assets. The input and feedback of the community is sought.
Open communication	Sound governance and leadership across the community	In implementing asset management practices, Oberon Council is seeking to make improvements in the management of its road asset portfolio, across the whole of the asset lifecycle.

The Council will exercise its duty of care to ensure public safety in accordance with the infrastructure risk management plan prepared in conjunction with this AM Plan. Management of infrastructure risks is covered in Section 5.2

3.3 Legislative Requirements

We have to meet many legislative requirements including Australian and State legislation and State regulations. These include:

Table 3.3: Legislative Requirements

Legislation	Requirement
Local Government Act	Sets out role, purpose, responsibilities and powers of local governments including the preparation of a long term financial plan supported by asset management plans for sustainable service delivery.
Roads Act, 1993	Sets out the rules to be followed and responsibilities of users of the roads system and how the rules are enforced
Work Health and Safety Act 2011	This Act aims to secure and promote the health, safety and welfare of people at work and to protect people at a place of work against risks to health or safety arising out of the activities at work.
Environmental Planning and Assessment Act, 1979	Provides for the protection of the environment, established the Department of the Environment and defines its functions and powers
Australian Standards and RTA Traffic Control at Worksites Manual, 2010	Provides guidance for transport asset managers in use of transport services such as AS 1742; Manual of Uniform Traffic Control Devices
Australian Road Rules	The Australian Roads Rules are incorporated into State Traffic Regulations under the Road Traffic Act

3.4 Current Levels of Service

We have defined service levels in two terms.

Community Levels of Service measure how the community receives the service and whether the organisation is providing community value.

Community levels of service measures used in the asset management plan are:

Quality	How good is the service?
Function	Does it meet users' needs?
Capacity/Utilisation	Is the service over or under used?

Technical Levels of Service - Supporting the community service levels are operational or technical measures of performance. These technical measures relate to the allocation of resources to service activities that the organisation undertakes to best achieve the desired community outcomes and demonstrate effective organisational performance.

Technical service measures are linked to annual budgets covering:

- Operations – the regular activities to provide services such as opening hours, cleansing frequency, mowing frequency, etc.
- Maintenance – the activities necessary to retain an asset as near as practicable to an appropriate service condition (e.g. road patching, unsealed road grading, building and structure repairs),
- Renewal – the activities that return the service capability of an asset up to that which it had originally (e.g. frequency and cost of road resurfacing and pavement reconstruction, pipeline replacement and building component replacement),
- Upgrade – the activities to provide an higher level of service (e.g. widening a road, sealing an unsealed road, replacing a pipeline with a larger size) or a new service that did not exist previously (e.g. a new library).

Asset managers plan, implement and control technical service levels to influence the customer service levels.⁴

Our current service levels are detailed in Tables 3.4.a to 3.4.g. Levels of Service for road assets were workshoped by Councillors on Tuesday 12 November 2013.

Table 3.4a
Levels of Service- Bridges

Key Performance Measure	Level of Service	Performance Measure Process	Current Performance	Performance Target
COMMUNITY LEVELS OF SERVICE				
Quality	Bridges and culverts will provide on-going, uninterrupted and safe access for the community across the Shire.	Number of bridges in unserviceable condition that have been closed for safety reasons.	No bridges closed in Oberon due to poor condition for safety reasons.	No "closed" bridges.
Function	Bridges and culverts are fit for purpose (i.e. satisfy minimum width requirements for road users, with no restrictive height or weight limits)	Monitor and track customer requests and complaints.	No complaints	No requests or complaints about the poor Council maintenance or management of bridges
Capacity/ utilisation	Bridges and culverts can be used by all traffic	Number of bridges with load restrictions/ weight limits	No bridges with load restrictions	No bridges with inappropriate local restrictions
TECHNICAL LEVELS OF SERVICE				
Operations	Bridges and culverts will be renewed and replaced as they age and their condition deteriorates.	Condition assessment of bridges to be undertaken every three years.	Of 23 bridges, 3 are in fair condition and 4 in poor condition.	No bridges in "poor" condition. Less than 50% of bridges to be in "fair" condition
Maintenance	Bridges and culverts are maintained in the most cost effective manner.	Maintenance expenditure to be tracked against bridge and culvert condition ratings.	Bridge maintenance expenditure within budget. Bridge maintenance performed by a contractor.	Bridges and culverts with high maintenance costs and poor condition to be identified and targeted for replacement
Renewal	Bridges are fit for purpose	Useful life of assets	No bridges failing before useful life is reached	100 years
Upgrade	Bridges are replaced with modern structures before they reach the end of their useful life	Useful life of assets	No bridges older than 100 years	100 years

⁴ IPWEA, 2011, IIMM, p 2.22

Table 3.4b

Levels of Service- Regional Roads

Key Performance Measure	Level of Service	Performance Measure Process	Current Performance	Performance Target
COMMUNITY LEVELS OF SERVICE				
Quality	Provide smooth ride.	Customer service requests	3 per month or less	2 per month
Function	Meets user requirements for -Road width -accessibility -use of traffic control device	Customer service requests relating to width, access and traffic control	1 per month	5 per year
Capacity/ Utilisation	Regional roads meet users needs	Customer requests relating to road capacity	1 per month	5 per year
TECHNICAL LEVELS OF SERVICE				
Operations	Regional roads are closed when conditions are unsafe. Council responds promptly.	Time taken to close the road following notification	Closure occurs within 4 hours of Council becoming aware that conditions are unsafe	Closure occurs within 2 hours of Council becoming aware that conditions are unsafe. Road reopened promptly once safe.
	Provide a safe suitable road, free from hazards	Inspection frequency	Once a month	Once a month
Maintenance	Ensure facilities are safe-clear signage, good traffic control devices and facilities, no major surface defects	On-going program of regional road maintenance	Road maintenance budget is inadequate	Road maintenance budget is adequate to meet needs.
Renewal	Condition of road is acceptable to drivers	Number of kilometres of regional road resealed each year	1km (2012/13)	10km
Upgrade	Roads are reconstructed to a higher standard where need exists.	Number of kilometres of regional road reconstructed each year	1km (2012/13)	4km

Table 3.4c
Levels of Service- Urban Roads Sealed

Key Performance Measure	Level of Service	Performance Measure Process	Current Performance	Performance Target
COMMUNITY LEVELS OF SERVICE				
Quality	Provide smooth ride.	Customer service requests	3 per month	6 per year
Function	Meets user requirements for -Road width -accessibility -use of traffic control device	Customer service requests relating to width, access and traffic control	3 per month	6 per year
Capacity/ utilisation	Streets are appropriate for usage	Customer service requests relating to road capacity	0 per month	0 per month
TECHNICAL LEVELS OF SERVICE				
Operations	Streets are clean	Street sweeping frequency	3 blocks around Main St swept daily. Occasional sweeping of industrial area.	3 blocks around Main St swept daily. Occasional sweeping of industrial area.
Maintenance	Streets are suitable for purpose	On-going program of urban road maintenance.	Road maintenance budget is inadequate	Road maintenance budget is adequate to meet needs.
Renewal	Streets are fit for use	Condition of sealed pavements	Less than 5% with condition	Less than 5% with condition 5
		Reseal program	1km per year	3km per year
Upgrade	Streets are reconstructed before they fail	Budget for sealed urban road reconstruction.	Nil. No budget.	500m per year

Table 3.4d
Levels of Service- Rural Roads Sealed

Key Performance Measure	Level of Service	Performance Measure Process	Current Performance	Performance Target
COMMUNITY LEVELS OF SERVICE				
Quality	Provide smooth ride.	Customer service requests relating to road condition	6 per month	3 per month
Function	Meets user requirements for -Road width -accessibility	Customer service requests relating to width, access and traffic control	3 per month	1 per month
Capacity/ utilisation	Rural roads are appropriate for usage	Customer service requests relating to road capacity	1 per month	0 per month
TECHNICAL LEVELS OF SERVICE				
Operations	Rural roads are safe	Inspection frequency	Inspections are per Council's Road Response Risk Management Policy	Inspections are per Council's Road Response Risk Management Policy
Maintenance	Rural Roads are suitable for purpose	On-going program of rural sealed road maintenance within budget.	Road maintenance budget is inadequate	Road maintenance budget is adequate to meet needs.
Renewal	Rural roads are fit for use	Condition of sealed pavements	Less than 5% with condition 5	Less than 5% with condition 5
		Reseal program	4.7km (2012/13)	28 km
Upgrade	Roads are reconstructed before they fail	Budget for sealed rural road reconstruction.	Nil (2012/13)	5km

Table 3.4e
Levels of Service- Rural Roads Unsealed

Key Performance Measure	Level of Service	Performance Measure Process	Current Performance	Performance Target
COMMUNITY LEVELS OF SERVICE				
Quality	Provide smooth all weather access	Customer service requests	6-10 per month	1-3 per month
Function	Access is available at all times	Customer service requests	6-10 per month	1-3 per month
Capacity/ Utilisation	Roads are appropriate for usage	Customer service requests relating to road capacity	2 per month	1 per month
TECHNICAL LEVELS OF SERVICE				
Operation	Unsealed roads meet users needs	Annual condition and defects inspection	Inspections carried out in accordance with Council's road Response Risk Management Policy	Inspections carried out in accordance with Council's road Response Risk Management Policy
Maintenance	Unsealed roads are fit for purpose	Grading frequency	3 graders in constant use around the Shire when moisture conditions are suitable for grading	Dedicated wet grading crew with water cart working all year round and a supplementary grader in use when moisture conditions are suitable.
		Budget	All maintenance is reactive	Implement planned maintenance schedule for unsealed rural roads.
Renewal	Unsealed roads are fit for purpose	Number of kilometres of unsealed road resheeted per year	4km (2012/13)	5% of network (approximately 26km) = 20 year useful life.
Upgrade	Residents have sheeted road access	Number of dwellings without sheeted road access	Less than 50 (approximate)	All dwellings are served by a sheeted road.

Table 3.4f
Levels of Service- Kerb and Gutter

Key Performance Measure	Level of Service	Performance Measure Process	Current Performance	Performance Target
COMMUNITY LEVELS OF SERVICE				
Quality	Provide road drainage and collection system	Customer service requests	Less than 1 per month	2 per year
Function	Ensure that road drainage is fully operational and meets users requirements	Customer service requests relating to lack of kerb and gutter	Less than 1 per month	2 per year
Capacity/ Utilisation	Kerbs are appropriate for water flow	Customer service requests relating to kerb capacity.	Less than 1 per month	1 per year
TECHNICAL LEVELS OF SERVICE				
Operation	Kerb and gutter meets users needs	Cleaning to remove blockages from kerb and gutter.	Upon request – as required	Issues to be investigated within 24 hours, work prioritised, and resident notified accordingly
Maintenance	Kerb and gutter is suitable for purpose	Reactive service requests are completed within adopted timeframe	To be measured	100%
Upgrade	Urban residents have kerb and gutter at their frontage	Number of urban dwellings without kerb and gutter	Less than 10%	Less than 10%

Table 3.4g
Levels of Service- Footpaths

Key Performance Measure	Level of Service	Performance Measure Process	Current Performance	Performance Target
COMMUNITY LEVELS OF SERVICE				
Quality	Provide an even surface for pedestrians	Customer service requests relating to surface condition	1-2 per year	Nil
Function	Meets users needs for accessibility	Customer service requests relating to lack of footpath	Nil	Nil
Capacity/ Utilisation	Footpaths are appropriate for usage	Customer service requests relating to footpath capacity and/ or usage.	Nil	Nil
TECHNICAL LEVELS OF SERVICE				
Operation	Footpaths meet the user's needs	Six monthly condition and defects inspection	Inspections carried out	Inspections carried out.
Maintenance	Footpaths are fit for purpose	Maintenance budget	All footpath maintenance is reactive.	Implement planned maintenance schedule for footpaths.
Upgrade	Urban residents have paved footpath access to shops and schools	Number of urban residences without access to a footpath	33% approximately	Urban residences are within 100m of a paved footpath

3.5 Desired Levels of Service

Indications of desired levels of service are obtained from community consultation/engagement. The asset management planning process includes the development of 3 scenarios to develop levels of service that are financially sustainable.

4. FUTURE DEMAND

4.1 Demand Drivers

Drivers affecting demand include population change, changes in demographics, seasonal factors, vehicle ownership rates, consumer preferences and expectations, technological changes, economic factors, agricultural practices, environmental awareness, etc.

4.2 Demand Forecast

The present position and projections for demand drivers that may impact future service delivery and utilisation of assets were identified and are documented in Table 4.3.

4.3 Demand Impact on Assets

The impact of demand drivers that may affect future service delivery and utilisation of assets are shown in Table 4.3.

Table 4.3: Demand Drivers, Projections and Impact on Services

Demand drivers	Present position	Projection	Impact on services
Population change	Population has fluctuated between 5238 (2007) and 5207 (2011). Relatively static. Population is aging. Median age during this period has risen from 39.2 (2007) to 41.5 (2011).	Population will remain constant but continue to age.	Community expectations may change. Older residents may be more vocal in expressing their opinions to Council regarding road related matters.
Industry	Highest employers in Oberon are agriculture, forestry and fishing 17.4% and electricity, gas, water and waste services 18.9%. (2011)	Forestry industry in particular will demand better road access to tree plantations, and improved road to transport freight.	Pressure on Council to seal unsealed roads and upgrade existing sealed roads. Industry may be willing to contribute to costs.
Climate change	Sub-surface water rises to ground level via springs. Water damages road pavement and seal.	Changes in climate may lead to changes in the frequency of springs causing road pavement defects.	Regular condition assessment of roads will be required to identify hazards.
Vehicle ownership	Number of registered motor vehicles has increased from 813 (2007) to 875 (2011).	Number of registered motor vehicles will continue to rise as public transport options in Oberon are limited.	Increased traffic on roads leading to more rapid deterioration of road surfaces.

4.4 Demand Management Plan

Demand for new services will be managed through a combination of managing existing assets, upgrading of existing assets and providing new assets to meet demand and demand management. Demand management practices include non-asset solutions, insuring against risks and managing failures.

Non-asset solutions focus on providing the required service without the need for the organisation to own the assets and management actions including reducing demand for the service, reducing the level of service (allowing some assets to deteriorate beyond current service levels) or educating customers to accept appropriate asset failures⁵. Examples of non-asset solutions include providing services from existing infrastructure such as aquatic centres and libraries that may be in another community area or public toilets provided in commercial premises.

⁵ IPWEA, 2011, IIMM, Table 3.4.1, p 3|58.

Opportunities identified to date for demand management are shown in Table 4.4. Further opportunities will be developed in future revisions of this asset management plan.

Table 4.4: Demand Management Plan Summary

Demand Driver	Impact on Services	Demand Management Plan
Population change	Changes to community expectations.	Council to publicise draft levels of services for roads and see community feedback. Levels of service only to be adopted after thorough community consultation.
Industry	Pressure on Council to seal unsealed roads and upgrade existing sealed roads.	Council to liaise with Forestry NSW to identify candidate roads, then negotiate funding contributions for targeted works.
Climate change	Regular condition assessment of roads will be required to identify hazards.	Hazards caused by underground springs to be identified and rectified in accordance with Council's Road Response Policy.
Vehicle ownership	Increased traffic on roads leading to more rapid deterioration of road surfaces.	Council to facilitate community transport and support public transport, to give residents, particularly aging residents, transport options.
